I urge you not to stop XM radio from broadcasting the traffic and local content to the public. I pay for this service primarily for this reason and think that the money I spend should go for what I prefer, not what the NAB prefers. Local radio services do not care what the public wants to hear and have no real interest in their local communities, so why should they maintain their monopolies? The US founded the purest concept of free enterprise and capitalism which dictates that any and all competitors should have access and let the consumer make the decision of what products they want.
